

– Functional Methylation –

The Whole concept:

Methylation, Functional Medicine,

Genetics and Kinesiology

Jared Allomong, DC

☀ In Person AND Live Telecast ☀

This seminar is designed to synergize the most important concepts in the Functional Methylation Technique Education platform. Whether you are brand new to the technique or have taken all the education, this seminar puts the whole idea together. It focuses on the most impactful SNPs, kinesiology patterns, and biochemistry that you will see in your clinical practice. Offering supplements, guidance and next step tools to use Functional Methylation in whatever type of clinical practice you are currently doing.

We will also introduce the new Infection Inspection test kit which provides an advanced way to investigate and deal with intestinal health and infection. Learn more about each product in the Balance and Renew lines of Nutri-West and how they apply to the Functional Methylation technique for better results. Knowledge of genetic SNPs and their influence on biochemistry is shaping each client's health and the Functional Methylation technique teaches you how to apply this knowledge effectively in practice.

This is a brand-new seminar,

You do NOT want to miss this!
